Dear U.S. Bank Software Engineering Team,   December 10, 2025

I'm excited to apply for the Software Engineer position at U.S. Bank. As a senior Computer Science student at the University of Idaho and current Software Engineering Intern at Schweitzer Engineering Laboratories, I've developed a passion for creating dependable, user-focused applications—work that closely aligns with U.S. Bank's mission to help customers make smarter financial decisions through reliable technology.

At SEL, I've designed and deployed full-stack microservices using React (TypeScript) and Go, automated testing and delivery with Jenkins and Cypress, and containerized applications with Docker and Kubernetes. These experiences strengthened my ability to write secure, maintainable code and to think critically about scalability, reliability, and performance—values that reflect U.S. Bank's focus on engineering excellence and customer trust.

My background aligns closely with your preferred qualifications:

o Frontend expertise: React, TypeScript, MUI, and CSS with modular and accessible UI design.
o Backend and DevOps: RESTful APIs in Go and Python, containerized deployments via Docker and Helm, and CI/CD pipelines using Jenkins.
o Testing and Security: Automated unit and integration testing with Jest and Cypress; understanding of frontend security practices.
o Collaboration: Experience working on cross-functional software teams, emphasizing clear documentation, effective communication, and coordinated development workflows.

I'm especially drawn to U.S. Bank's opportunities in Colorado, where the growing innovation culture and abundance of outdoor opportunities deeply resonate with me. At the same time, I'm open to opportunities across U.S. Bank locations where I can continue growing as an engineer and contributing to projects that have tangible impact for customers and communities alike.

Thank you for your time and consideration—I would welcome the opportunity to discuss how my full-stack development and DevOps experience can support U.S. Bank's continued success.

Joseph Baruch
